Properties and units in the clinical laboratory sciences

Part XVI. Properties and units in clinical allergology

(Technical Report)

Abstract: The subject field of clinical allergology deals with many hundreds of different allergens from all parts of the human environment, and the number steadily increases. Not all of the allergens are strictly defined in chemical terms, and procedures for detection of antibodies against allergens in humans vary.

This document deals with the presentation of request and report on such properties according to some international rules and the allocation of code values representing the concept delineated.

The coding scheme thus prepared is imperfect and needs further elaboration as allergens become more well defined. It is a step toward harmonization, in particular as concerns the coding system applied.

The net outcome is a coding scheme for use in electronic transmission.

PREFACE

The present document is part sixteen (XVI) of a series on properties observed in the clinical laboratory sciences initiated in 1987.

The series will comprise the five general parts (I–IV and XI) and a series of special parts:

- I. Syntax and semantic rules [1]
- II. Kinds-of-property [2]
- III. Elements (of properties) and their code values
- IV. Properties and their code values
- V. Properties and units in thrombosis and haemostasis
- VI. Properties and units in IOC-prohibited drugs
- VII. Properties and units in inborn errors of metabolism
- VIII. Properties and units in clinical microbiology
- IX. Properties and units in trace elements
- X. Properties and units in general clinical chemistry
- XI. Coding systems: structure and guidelines [3]
- XII. Properties and units in clinical pharmacology and toxicology
- XIII. Properties and units in reproduction and fertility
- XVI. *Properties and units in clinical allergology (this report)*

The NCCLS code values are reproduced with permission from NCCLS publication I/LA20-P [4].

FOREWORD AND SCOPE

Basic research in biology and medicine and innovations in laboratory methodology have greatly increased the range of properties available to medical practitioners to help them in decisions on diagnosis, treatment, and prevention of disease.

The plethora is now such that the individual doctor has insight in or understanding of only a limited number of properties offered to him or her from the various clinical laboratory specialties.

In the laboratory, local terms (jargon) may be well understood among colleagues, but they are not appropriate for communication with the outside world. Likewise, a laboratory and its local community of users, such as hospital or community physicians, may use a “local dialect” of the language of clinical laboratory sciences which is well understood by all concerned, but when the communication possibilities are wider, even transnational, risks of serious misunderstanding arise.

In addition, the terminology used by one laboratory specialty may vary even within the specialty, and may be incomprehensible to another specialty. This inconsistency is a minor inconvenience to the laboratory specialties, each one essentially operating within its own area of activity. However, for the user this inconsistency is highly unsatisfactory and may hinder treatment of the patient.

It is therefore essential to promote clear, unambiguous, meaningful, and fully informative communication. Also, coherence of statements made within and between medical specialties, and uniformity in structure of presentation is to be strived for. This coherence will facilitate transfer of information over cultural, alphabetic, and language areas.

The purpose of this document is to apply the syntax structures for request and report recommended by the European standards ENV 1614:1995 [6] and ENV 12435:1996 [7] and by IUPAC–IFCC [1,5], providing formats and names of properties observed in the domain of clinical allergology, in order to facilitate unequivocal written or electronic communication between health care professionals.

The systematic names recommended here are primarily for the purpose of unambiguous data exchange. Their use in routine language by clinicians or laboratory practitioners is optional but encouraged.

SPECIAL FEATURES

The term “arbitrary”, in principle, cannot be related to a volume. In clinical chemistry, however, a less well-defined “inhouse” or regional calibrator is often referred to and is expressed in “arbitrary unit per liter” in order to enable comparison of patient data over time and regionally. In each of these instances further information should be given in the parenthesis “procedure”. This information could be on the calibrator used, e.g., “BCR/CRM148/149R”, or it could refer to the in-laboratory document “procedure xx” that is available on request (point 2.2.1 below).

In the examples given, a question mark, “?”, has been used to represent the value of a result for properties including quantities.

1. *Names of component.* Both in histamine release and for antibodies, part of the name is from food, dust, poison, or other parts of the human environment. For identification of these complex materials, the NCCLS code values have been added as a specification after the kind-of-property.

EXAMPLE 1

Basophilocytes(Blood)—

***Candida albicans* induced HR;**

arbitrary concentration(NCCLS/m5; procedure)

[NPU08867]

Basocs.(B)—*Candida albicans* induced HR; arb.c.(NCCLS/m5; 0 1 2 3) = ?

The NCCLS code values are also used for classification into lists for ease of assembling panels by the individual clinical laboratory.

2. *Kinds-of-property*. These comprise:

2.1 arbitrary concentration denoting an ordinal scale of the type 0 1 2; 0 1 2 3 4 5, etc.

EXAMPLE 2

Plasma—

***Candida albicans* antibody(Immunoglobulin E);
arbitrary concentration (NCCLS/m5; procedure)
[NPU11311]**

P—*Candida albicans* antibody(IgE); arb.c.(NCCLS/m5; 0 1) = ?

2.2 arbitrary substance concentration, that is a ratio scale of the dimension $L^{-3}N$, where the unit is not traceable to SI.

2.2.1 When the calibrator used is produced locally, arbitrary unit/liter applies.

EXAMPLE 3

Plasma—

***Candida albicans* antibody(Immunoglobulin E);
arbitrary substance concentration(NCCLS/m5; procedure)
arbitrary unit/liter
[NPU13064]**

P—*Candida albicans* antibody(IgE); arb.subst.c.(NCCLS/m5) = ? $\times 10^3$ arb.unit/l

2.2.2 When the calibrator is traceable to a WHO international reference material, international unit/liter applies.

EXAMPLE 4

Plasma—

***Candida albicans* antibody(Immunoglobulin E);
arbitrary substance concentration(WHO75/502; NCCLS/m5; procedure)
 10^3 international unit/liter
[NPU10865]**

P—*Candida albicans* antibody(IgE); arb.subst.c.(IRP 75/502; NCCLS/m5) = ? $\times 10^3$ int.unit/l

3. Specification after kind-of-property

These may indicate the WHO international reference preparation (IRP) used for calibration, inform on the NCCLS identifier for the component, inform on the procedure used in that particular laboratory (“procedure 65” or “firm xx”), or indicate that a list of properties follows.

4. General approach

The NCCLS coding scheme comprises 361 allergens. The approach, in a particular allergy case, is to request a property that concerns a mixture of allergens at first and then, if the outcome is affirmative, to request the properties included in the mixture, individually.

EXAMPLE 8

Initially:

NPU14814 P—Occupational allergen antibody(IgE); arb.c.(NCCLS/(m3; m6; g15; g12); 0 1) = 1

Then:

NPU11259 P—*Alternaria alternata* antibody(IgE); arb.c.(NCCLS/m6; 0 1) = 0

NPU11277 P—*Aspergillus fumigatus* antibody(IgE); arb.c.(NCCLS/m3; 0 1) = 1

NPU11423 P—Wheat grass antibody(IgE); arb.c.(NCCLS/g15; 0 1) = 0

NPU09341 P—Rye antibody(IgE); arb.c.(NCCLS/g12; 0 1) = 0

Or:

NPU13012 P—*Alternaria alternata* antibody(IgE); arb.subst.c.(NCCLS/m6; Firm A) = 0×10^3 arb.unit/l

NPU13030 P—*Aspergillus fumigatus* antibody(IgE); arb.subst.c.(NCCLS/m3; Firm A) = 200×10^3 arb.unit/l

NPU13176 P—Wheat grass antibody(IgE); arb.subst.c.(NCCLS/g15; Firm A) = 0×10^3 arb.unit/l

NPU09343 P—Rye antibody(IgE); arb.subst.c.(NCCLS/g12; Firm A) = 0×10^3 arb.unit/l

Or:

ELEMENTS OF AN ENTRY

The terms recommended are given in bold; that is, the term for the type property, the unit, and the code value.

- 1 **Name of system and parenthetic specification spelled out in full, and followed by a long dash (em dash).**
- 2 **Alphanumeric chemical prefixes to component name.**
- 3 **Recommended name of component and parenthetic specification. Shifted to the left for alphabetical sorting and searching, and followed by a semicolon.**
- 4 **Kind-of-property and parenthetic specification.**
- 5 **Unit.**
- 6 Other term(s).
- 7 Note(s) with any further information.
- 8 **[NPUXXXXX]**
Coding scheme identifier and code value, intended for interlaboratory transmission between databases.
- 9 Example in abbreviated form.
